

SAFETY WORKWEAR

WORK SAFE
HOME SAFE

WORKWEAR

XINKE PROTECTIVE

**ANSI/ISEA 107**

American National Standards Institute (ANSI) 107 – American National Standard for High-Visibility Safety Apparel and Accessories. The 360° reflective coverage of ANSI 107 Type R Class 3 compliant garments provides the highest Hi-Vis safety rating for work environments where visibility is of the highest importance.
*Based on independent testing

**NFPA 70E**

The National Fire Protection Association's (NFPA) 70E – Standard for Electrical Safety in the Workplace establishes requirements for the protection of employees from possible exposure to workplace electrical discharge hazards.
*Based on independent testing

**UL**

UL provides safety-related certification, validation, testing, inspection, auditing, advising and training services to a wide range of clients, including manufacturers, retailers, policymakers, regulators, service companies, and consumers.

**EN ISO 20471**

High-visibility garments are designed to make their wearers noticeable to vehicle drivers or other mechanical equipment operators in all lighting conditions, both during the day and at night in the light of a vehicle's headlights.
The class of the garment is determined using 2 criteria:
1. The area of fluorescent fabric (yellow, orange, or red)
2. The area of retroreflective tape or material.

**EN ISO 11612**

This standard describes overalls made from a flexible fabric which are designed to protect the user's body, except the hands, from heat and/or flames. With the exception of hats and gaiters, garments for the protection of the head, hands or feet are not covered. The standard is divided into six indices: A1-A2, B1-B3, C1-C4, D1-D3, E1-E3 and F1-F3. The higher the value, the better the protection attained.

**EN 342**

The best way to protect yourself from the cold is to use workwear that is certified in accordance with EN 342. Each individual product is classified in accordance with different values: thermal insulation value, degree of air permeability and, if applicable, waterproofness (WP). The higher the insulation value, the better the protection. The insulation value is stated by the product. Air permeability is stated as a pictogram and is graded from 1–3 with three being the highest.

**EN 13034**

This standard describes the performance requirements for chemical protective clothing that provides limited protection against liquid chemicals (type six and type PB [6] equipment). Chemical protective clothing with a limited performance ability is intended for use in the event of potential exposure to low volume splashes, fluid dispersion or spray with low pressure and volume.

**NFPA 2112**

The National Fire Protection Association's (NFPA) 2112 – Standard on Flame-Resistant Clothing for Protection of Industrial Personnel Against Short-Duration Thermal Exposures from Fire establishes the requirement for certifying garments designed to provide protection of employees from possible flash fire hazards in the workplace.
*Based on independent testing

**ASTM F1506**

This American Society for Testing and Materials (ASTM) international specification covers the minimum design characteristics and performance requirements for occupational apparel worn by electrical workers exposed to momentary electric arc and related thermal hazards.

**EN ISO 11611**

This standard specifies the minimum requirements for protective clothing used when welding or performing similar processes with comparable risks. There are two classes, one and two, with class two being the highest (= the best level of protection).

**EN 61482-2**

EN 61482-2 certification contains two test methods. The first test method (EN IEC 61482-1-1, open electric arc test) tests the fabric and garment in order to determine the ATPV/EBT value of the clothing. The second method (EN 61482-1-2, the box test) determines the electric arc protection class of the fabric and the garment through the use of a forced and controlled electric arc. There are two different classes, with class two being the highest and offering the best protection.

**EN 1149-3/5**

EN 1149-3 - electrical discharge.
This standard describes the breakdown of electrostatic charges from the surface of the clothing materials.
EN 1149-5 - materials performance and design
This standard describes the requirements for the materials and design of electrostatic dissipative protective clothing which is used as part of a grounded system to prevent incendiary discharges.

**EN 343**

EN 343 is a European standard for protective clothing. Look for EN 343 certification if you want guaranteed comfort even when it is windy and raining. You will find two values beside the symbol for EN 343. The first value indicates waterproofness. The second value indicates the breathability of the product. Both values are divided into classes from 1–3, with three indicating the highest class in both cases.

**OEKO-TEX®STANDARD 100**

OEKO-TEX®certification means it has been tested and is proven safe to use in clothing that is in contact with the skin. Guarantee that the harmful chemicals that could be left in the finished product do not exceed the permitted values.

WORKWEAR

A man with short brown hair and a beard stands in front of a rustic stone wall. He is wearing a tan, long-sleeved button-down work shirt with two chest pockets and blue jeans. The background is a blurred forest scene with sunlight filtering through the trees.

SHIRTS

DENIM FR WORK SHIRT WITH PEARL SNAPS

COLOR:

This Denim FR Shirt is perfect for the man who needs a shirt as rugged as the conditions he's working in. A flame resistant material, providing increased protection against electric arc flash and flash fire exposures.

These qualifications make this shirt ideal for electricians, chemical and refinery workers, where there exists a risk of dust explosions.

Fabric is mercerized and designed to provide minimal shrinkage, maximum comfort and optimum safety and durability.

FEATURES:

- Inherently Aramid sewing thread
- Durable FRDURATEX® fabric
- 2 breast pockets, with flaps and snap closure
- White Pearl Snaps on pocket, placket and cuff closures
- Double needle stitching on shoulder seams, pockets and flaps

WOMEN'S NON-FR WORK SHIRT
